

City of Seattle

---

Gregory J. Nickels, Mayor

**Department of Planning and Development**

D. M. Sugimura, Director

**CITY OF SEATTLE  
ANALYSIS AND DECISION OF THE DIRECTOR  
OF THE DEPARTMENT OF PLANNING AND DEVELOPMENT**

**Application Number:** 3004688  
**Applicant Name :** Brad Conway  
**Address of Proposal:** 1707 Dexter Avenue North

**SUMMARY OF PROPOSED ACTION**

Land Use Application to establish use for future construction of two new buildings in an environmentally critical area, one structure with two apartment units above two live-work units at street level, and one structure with two apartment units. Parking for eight vehicles will be located within the structures. The existing triplex will be demolished.

The following approval is required:

**SEPA - Environmental Determination** – Chapter 25.05, SMC

**SEPA DETERMINATION:** ☐ Exempt ☒ DNS ☐ MDNS ☐ EIS

☐ DNS with conditions

☐ DNS involving non-exempt grading, or demolition, or involving another agency with jurisdiction.

**BACKGROUND DATA**

Site and area description

The 5,410 square-foot site is located in a Neighborhood Commercial Three zone with a structure height limit of 40 feet (NC3-40') on Dexter Avenue North on the east slope of Queen Anne Hill. The site slopes from the west to the east, from the alley down to the front property line approximately 30 feet. There is a mapped Environmentally Critical Area (ECA) due to the presence of steep slopes on the

northwest portion of the site. The entire site is mapped as an ECA due to slide-prone soils. The applicant was granted a Limited Exemption from the steep slope standards of the ECA Ordinance on February 8, 2006, in association with the related Building Permit (DPD No. 6067279.) The project is still subject to the ECA requirements regarding landslide-hazard ECAs. Surrounding properties immediately abutting the site to the north and south are also zoned NC3-40'. The zoning changes to Lowrise Three Multifamily Residential (L3) across Dexter Ave. N. to the east, and the Commercial One with a 65-foot height limit (C1-65') across the alley to the west. The site is currently occupied by a triplex, which is to be demolished.

### Proposal Description

The applicant proposes to construct two new structures. A structure with two live-work units and two apartment units above, will be located on the eastern half of the site, abutting Dexter Ave. N. (Building A.) A second structure with two apartment units will be located on the western half of the site, abutting the alley (Building B.) Vehicular access for both structures will be via the alley. Parking for eight vehicles will be provided in the structures. The existing triplex on site is to be demolished.

Building A will consist of a level of live-work space at street level on Dexter Ave. N., with three levels of living space and a roof deck, above. Building B will consist of a garage level with three levels of living space and a roof deck, above. Open space for Buildings A and B will be provided at the auto court level and on the roof decks in the total amount of 2121.26 sq. ft.

### Public Comments

No comment letters were received during the public comment period which ended on May 10, 2006.

### ANALYSIS - SEPA

Although the proposal site received a Limited Exemption from the Steep-slope development standards of the Environmentally Critical Areas Ordinance, it is still subject to other Landslide-Hazard and other applicable ECA submittal and development standards. Thus, the application is not exempt from SEPA review. However, SMC 25.05.908 provides that the scope of environmental review of projects within critical areas shall be limited to: 1) documenting whether the proposal is consistent with the City's Environmentally Critical areas (ECA) regulations in SMC 25.09; and 2) evaluating potentially significant impacts on the critical area resources not adequately addressed in the ECA regulations. This review included identifying additional mitigation measures needed to protect the ECA in order to achieve consistency with SEPA and other applicable environmental laws.

Environmental review resulting in a Threshold Determination is required pursuant to the Seattle State Environmental policy Act (SEPA), WAC 197-11, and the Seattle SEPA Ordinance (Seattle Municipal Code Chapter 25.05).

The initial disclosure of the potential impacts from this project was made in the environmental checklist submitted by the applicant dated April 3, 2006. The information in the checklist, supplemental information provided by the applicant (soils report), project plans, and the experience of the lead agency with review of similar projects form the basis for this analysis and decision.

The SEPA Overview Policy (SMC 25.05.665 D) clarifies the relationship between codes, policies, and environmental review. Specific policies for each element of the environment, certain neighborhood plans and other policies explicitly referenced may serve as the basis for exercising substantive SEPA authority. The Overview Policy states in part: "where City regulations have been adopted to address an environmental impact, it shall be presumed that such regulations are adequate to achieve sufficient mitigation" (subject to some limitations). Under certain limitations/circumstances (SMC 25.05.665 D 1-7) mitigation can be considered. Thus, a more detailed discussion of some of the impacts is appropriate.

### Short-term Impacts

The following temporary or construction-related impacts on the identified critical area are expected: 1) temporary soil erosion; and 2) increased vibration from construction operations and equipment. These impacts are not considered significant because they are temporary and/or minor in scope (SMC 25.05.794).

Several adopted codes and/or ordinances provide mitigation for some of the identified impacts. The Stormwater, Grading and Drainage Control Code regulates site excavation for foundation purposes and requires that soil erosion control techniques be initiated for the duration of construction. The ECA ordinance and DR 3-93 and 3-94 regulate development and construction techniques in designated ECA areas with identified geologic hazards. The Building code provides for construction measures and life safety issues. Compliance with these applicable codes and ordinances will reduce or eliminate most short-term impacts to the environment and no further conditioning pursuant to SEPA policies is warranted.

Due to the fact that grading will be undertaken during construction, additional analysis of earth and grading impacts is warranted.

### Earth/Soils

The ECA Ordinance and Directors Rule (DR) 3-93 require submission of a soils report to evaluate the site conditions and provide recommendations for safe construction in areas with landslide potential and/or a history of unstable soil conditions. A Geotechnical Engineering Study prepared by Geotech Consultants, Inc. of Bellevue, WA, and dated July 11, 2005, was submitted with this application and is undergoing separate geotechnical review by DPD. The construction plans, including shoring of excavations as needed and erosion control techniques are receiving separate review by DPD. Any additional information showing conformance with applicable ordinances and codes (ECA ordinance, The Stormwater, Grading and Drainage Control Code, DR 3-93, and 3-94) will be required prior to

issuance of building permits. Applicable codes and ordinances provide extensive conditioning authority and prescriptive construction methodology to assure safe construction techniques are utilized; therefore, no additional conditioning is warranted pursuant to SEPA policies.

#### Long-term Impacts

Long-term or use-related impacts are also anticipated as a result of this proposal including: increased surface water runoff due to greater site coverage by impervious surfaces, and loss of plant and animal habitat.

Several adopted City codes and/or ordinances provide mitigation for some of the identified impacts. Specifically these are: the ECA Ordinance, the Stormwater, Grading and Drainage Control Code which requires provisions for controlled tightline release to an approved outlet and may require additional design elements to prevent isolated flooding. Compliance with these applicable codes and ordinances is adequate to achieve sufficient mitigation of most long-term impacts and no further conditioning is warranted by SEPA policies.

#### DECISION - SEPA

This decision was made after review by the responsible official on behalf of the lead agency of a completed environmental checklist and other information on file with the responsible department. This constitutes the Threshold Determination and form. The intent of this declaration is to satisfy the requirements of the State Environmental Policy Act (RCW 43.21C), including the requirement to inform the public agency decisions pursuant to SEPA.

☒ Determination of Non-Significance. This proposal has been determined to not have a significant adverse impact upon the environment. An EIS is not required under RCW 43.21C.030 2C.

☐ Determination of Significance. This proposal has or may have a significant adverse impact upon the environment. An EIS is required under RCW 43.21C.030 2C.

#### CONDITIONS - SEPA

None required.
